Put this extra tractive effort to work for you

MAXIMIZE THE TRACTIVE EFFORT OF YOUR TRACKMOBILE

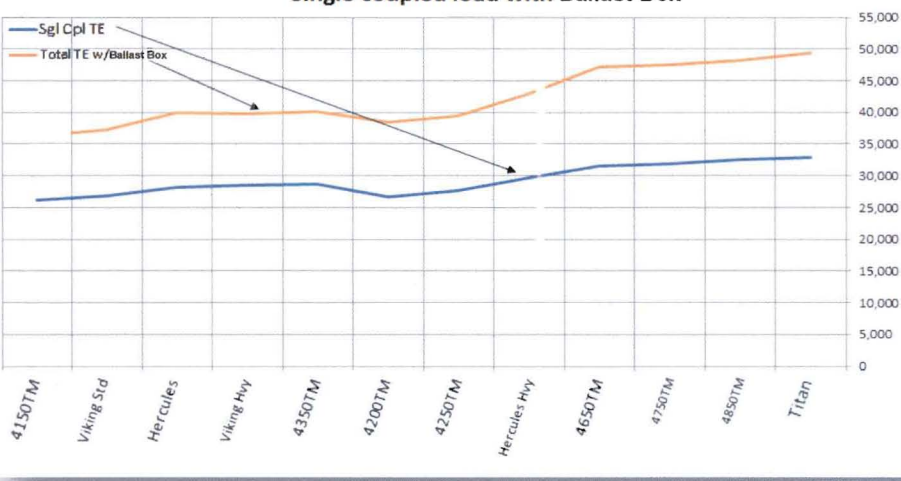

Since the earliest days of engineering; the concept of ballast weight has proven itself invaluable. It has been used in everything from bridge construction, to farm equipment. We thought this was a great concept; so we modified it to best serve your tractive interests! Based on product testing we are proud to say that this solution could give you an increase of 10-30% in additional tractive effort. The numbers speak for themselves.

SIMILAR EFFECT

This accessory provides a similar tractive effort to double coupling, without the obstruction of view.

Single coupled load with Ballast Box

DURABILITY

As you have come to expect from Trackmobile, the durability of our Ballast Box is no exception. The quality materials and rugged construction used in the Ballast Box framework assists in ensuring a long product lifecycle. These quality materials are what give the Ballast Box a basic weight of 4,500 lbs, before adding material.

CHOOSE YOUR CONTENTS

The large 90 cu. ft. interior capacity of our Ballast Box, allows you to fill it with tons of stuff, literally. The chart to the right shows some example materials that may be used to fill the box.

GOT SCRAP?

This Ballast Box is capable of holding scrap materials, which can often be found in or around an industrial facility. This translates into saving you money and putting these scraps to work, helping you move more railcars.

Ballast Box fill material

*This Ballast Box is designed for on-rail use ONLY.
